

Coolspool 29

Opis produktu

Powerful 28V DC aircraft start unit, fitted with solid state voltmeter, for use with larger twin turbine aircraft and helicopters where additional amp/hour capacity is required to maintain voltage under load.

- 2400 peak amps
 - Sealed lead acid AGM batteries
 - Cleared for air transportation
 - Internal charger with LED status
-
- Aluminium case with carry handle
 - Solid state voltmeter
 - Auxiliary/accessory socket
 - Available in 26V or 28V DC versions

The Coolspool 29 is available in two nominal output voltages, 26V DC or 28V DC. This aircraft start unit is used extensively on larger twin turbine aircraft and helicopters where additional amp/hour capacity is required to maintain voltage under load. Upper Faded limits vary according to the manufacturer's software and for this reason two versions of the Coolspool 29 are available.
